

University Placement and Internship Management System

1. Introduction

This project is about building a **web application** that helps universities manage **placements and internships** in a simple and organized way.

Instead of using emails, spreadsheets, or manual work, this system provides a **single platform** where:

- Students can apply for jobs/internships
- Companies can post opportunities
- Admins can manage everything

2. A project is needed (Problem)

Many universities face these problems:

- Placement data is handled manually
- Students don't get proper updates
- Hard to track who applied where
- Communication between students and companies is slow
- No proper analytics or reports

3. Solution

- Automate job posting and applications
- Allow real-time tracking of applications
- Provide notifications and updates
- Store all data securely in one place

4. Simple flow

1. Student logs in → creates profile → uploads resume
2. Recruiter logs in → posts job/internship
3. Student applies for a job
4. Recruiter reviews applications → shortlists candidates
5. Admin monitors everything

5. Technology Used (Tech Stack)

- **Frontend:** ReactJS → for user interface
- **Backend:** Python Fast API → handles logic & APIs
- **Database:** MySQL → stores all data
- **Authentication:** JWT → secure login system

6. Main Features

Student

- Create profile
- Upload resume
- Search and apply for jobs
- Track application status

Recruiter

- Post job/internship
- View applicants
- Shortlist candidates
- Schedule interviews

Admin

- Manage users
- Approve job postings
- Monitor system
- Generate report

7. Database

- Student details
- Company details
- Job postings
- Applications
- Notification

8. Benefits of this system

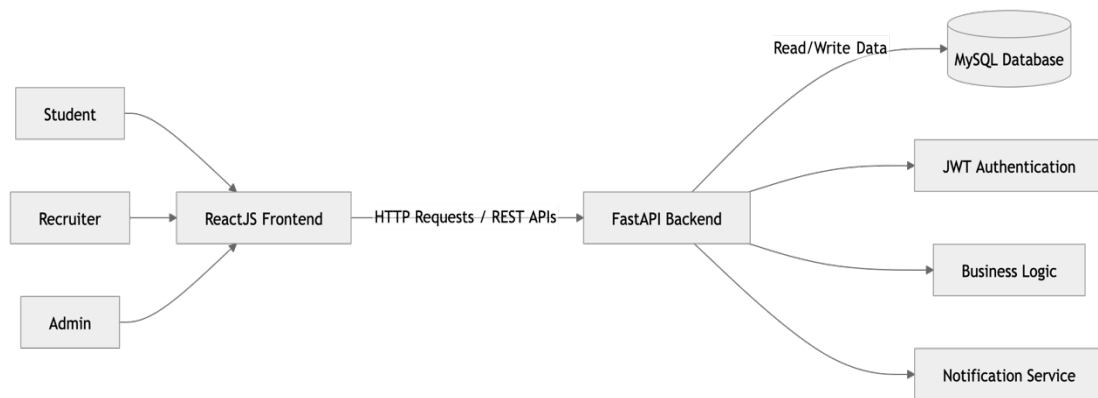

- Saves time (automation)
- Easy to use
- Transparent process
- Better communication
- Centralized data management

10. Conclusion

This project creates a **smart and efficient placement system** that replaces manual work with a **modern digital solution**.

- Efficiency
- Communication
- Student experience

Week 3 System Architecture Diagram Code

placement-management-system

frontend

- src
- components
- pages
- services
- App.js
- index.js

backend

- app
- main.py
- models
- schemas
- routes
- database
- auth

database

- placement system. SQL
